Abhinav G Krishnan

Bangalore, India | +91 9447715481 | abhinavgkrishnan@gmail.com | LinkedIn | Portfolio | Github

Profile

AI engineer focused on turning natural-language intent into reliable, executable systems. Agent orchestration, RAG, and the eval discipline to make generated output trustworthy. Backend-strong, ships end-to-end from retrieval to production; comfortable across AI and web3.

Core Skills

- **Languages:** Python, TypeScript, JavaScript, SQL
- **AI & ML:** RAG, Vector Search, Agent Orchestration, MCP, Prompt Engineering, LLM Integration, Evals
- **Backend & Data:** FastAPI, REST APIs, Webhooks, Kafka, DuckDB, Qdrant
- **Frontend & Infra:** Next.js, Docker, GCP, Supabase, Vercel, Git

Work Experience

WiseQ (agentic analytics platform for SMEs)
Founding Engineer (01.09.2026 – Present)

- Building the entire WiseQ platform from scratch as the sole engineer, across frontend, backend, and the agent layer: an agentic analytics product that lets non-technical SME teams ask business questions in plain language and get the analysis a data team would produce.
- Designed the agentic orchestration system that runs the full data-science lifecycle over connectors to a company's existing systems (ERPs, CRMs, HRMS), surfaced through a conversational command center.

AI Tech Cloud Network (formerly Solidus AI Tech: AI infrastructure & automation)
AI & Fullstack Engineer (01.02.2025 – 31.07.2026)

- Architected the backend of Forge, a visual AI workflow platform: composable engine of 18+ block types across 90+ tool integrations, MCP servers, and 6+ model providers, deployable as chat, REST API, webhook, or scheduled job.
- Built a RAG meta-agent that compiles plain-language prompts into runnable multi-step workflows, using live block metadata and a schema-validation retry loop to keep generated output valid.
- Shipped a natural-language sports-betting agent; eliminated context-overflow failures by routing oversized API responses through a DuckDB SQL layer and querying only the rows needed.
- Owned backend delivery end to end: deployment, production monitoring, Web3 wallet-connect authentication, and real-time multi-user collaboration.

Deloitte USI
Analyst (16.01.2023 – 31.01.2025)

- Owned the NetSuite side of a Salesforce-Boomi-NetSuite integration: reconciled field mappings, proration, and numeric accuracy across all three layers, and partnered directly with client stakeholders to onboard them and triage change requests.
- Delivered a custom billing solution covering a gap in native ERP functionality.

Education

Govt. Model Engineering College, Kochi (01.06.2018 – 31.05.2022)

B. Tech, Electronics & Communication Engineering (First Class)
